ColdFusion MX Essential Training

Synopsis

ColdFusion is a technology that enables you to build sophisticated Web applications quickly and efficiently. It uses a markup language similar to HTML, so the learning curve is short, but don't let that fool you. In this comprehensive introduction to ColdFusion MX, expert Joey Lott shows how to use this powerful program to build scalable, durable web applications. Working along with Joey, you'll not only review skills such as working with databases, using forms, storing persistent data, creating dynamic charts, uploading files, and using email features, but you'll also get a chance to apply this knowledge by building specific applications. This in-depth tutorial illustrates how you can make the most of ColdFusion's common workflow and best practices in your own web development.
